

## Fixing the error: Windows line endings detected: run 'dos2unix' to convert

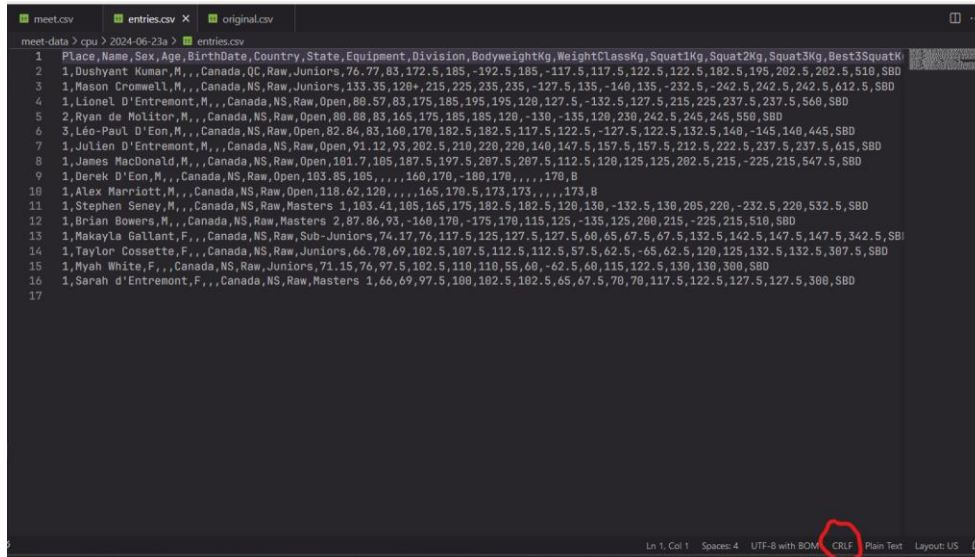

The screenshots below are from WebIDE

After adding the meet files to the meet folder, check the coding for line endings.

If it indicates CLRF, then they are Windows, and will trigger the error.

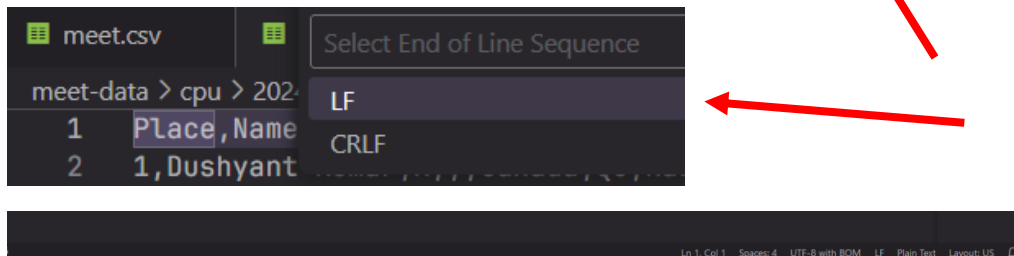

To avoid it, click on that box with "CLRF", at the top of your screen, you can select "CF".

Now, you can "commit" the three files and there will not be a "Windows line endings detected" error.

```

Click on CLRF, then select LF as the end of line sequence, at the top

Now, the line endings are in LF format, which will avoid the error.
